MX5000

FEATURES

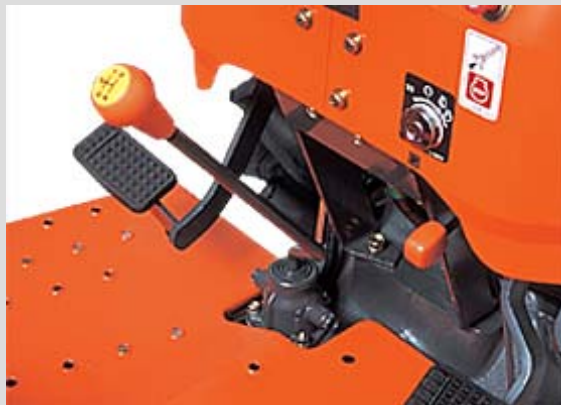

NEW PERFORMANCE MATCHED 3-POINT HITCH

The improved design and durability of Kubota's versatile new 3-point hitch will enable you to experience the full power and capabilities of the MX5000. The carefully constructed telescopic lower link end, crank-type lift rod and stabilizers give users 2,315 lbs. (1,050kg) of lifting capacity. While the easy-to-attach/detach Category I implements allow you to maximize your output with minimal labor. Thus, combined with Category II implements, you have a versatile 3-point hitch.

ENHANCED OPERATOR COMFORT

The full flat deck enables easy and safe tractor mounting or dismounting. We have added hanging pedals for more leg room and we have moved the Shuttle Lever to the left side of the driver's seat for easy operation.

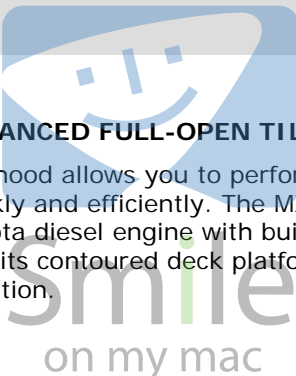

NEW SYNCHRO TRANSMISSION

The MX5000 lets you spring into gear with its high-powered 50 net engine HP and mechanical shuttle transmission. By implementing an independent and hydraulic PTO clutch system, it generates 44 PTO horsepower. Additionally, a smooth and agile performance is achieved by its new hanging clutch and brake pedals, which provide easier maneuverability when shifting. What's more, for increased productivity, you get maximum output from the MX5000 when using the basic LB 702 (1852 lbs. lifting capacity at pivot pin) or the heavy-duty LA 852-1 (2469 lbs. lifting capacity at pivot pin) front loaders.

ADVANCED FULL-OPEN TILT HOOD

The hood allows you to perform engine maintenance quickly and efficiently. The MX5000's powerful 50HP Kubota diesel engine with built-in balancer, coupled with its contoured deck platform achieves lower noise vibration.

FEATURES

LARGE TIRES

14.9-26" R1 Ag Tires are standard with 13.6-28" R1 Ag Tires available as an option. Industrial R4 tires and large turf tires are also available depending on your application.

LONG WHEELBASE

Long Wheelbase enhances balance and increases stability for handling rear implements. It's especially suited for six and seven foot rotary cutters.

E-TVCS ENGINE

This powerful 50.0 HP Kubota diesel engine, with its 44.0 PTO HP, delivers the highest output in its class. Internal balancers also create the smoothest running engine in this class. In addition, the unique E-TVCS has clean emissions that meet EPA regulations.

BEVEL GEAR 4WD

Thanks to Kubota's bevel gear 4WD system, the turning radius is comparable to that of a 2WD. As well as allowing exceptional mobility in tight areas, the bevel gear system allows a smooth power transfer to the wheels at all angles. All gears are hermetically sealed in oil to improve durability.
